

P5. Write a program to ask a user age and add 3 to his/her age and tease him/her.

Example:

=====

How old are you? **19**

You will be graduated at 22

=====

A **bold** font indicates what a user might type in. An *italic* is what the program reflects from what a user typed in.

Hint: (1) '+' and '' operator works differently on a string than on a number.*

(2) int('19') converts from string '19' to a number 19.
