P8. Write a program to get two numbers from a user and multiply them together, and print out the result:

Example:

```
=============================================

a:  8

b:  16

a*b = 128

=============================================
```

A **bold** font indicates what a user might type in. An *italic* is what the program reflects from what a user typed in.

Hint: 'a/b' is a string, while a/b is a computation statement.
