

P9. Write a program to get two numbers from a user and divide the first one by the second one, and print out the result:

Example:

=====

a: **8**

b: **16**

a/b = *0.5*

=====

A **bold** font indicates what a user might type in. An *italic* is what the program reflects from what a user typed in.

Hint: 'a/b' is a string, while a/b is a computation statement.
