P13. Write a program to get one word and one number (integer) from a user and repeat the word as the times specified by the number entered and print it out.

Example:

```
================================================

word 1: Python

number to repeat: 3

repeat (word 1) = PythonPythonPython

================================================
```

A **bold** font indicates what a user might type in. An *italic* is what the program reflects from what a user typed in.

Hint: 3*'Hello!' = 'Hello! Hello! Hello!'
