

P0. Write the following code, run and trace all values of its variables.

Given input is 8000, fill in the values of variables after the statement run in the blank spaces.

Code:

```

=====
elapsed_time = input('Enter the elapse time (sec):')
Seconds = int(elapsed_time)
what_left = Seconds          # P0.1 what_left = _____

Hours = what_left // 3600    # P0.2 what_left = _____; Hours = _____
what_left = what_left % 3600 # P0.3 what_left = _____; Hours = _____

Mins = what_left // 60      # P0.4 what_left = _____; Mins = _____
what_left = what_left % 60  # P0.5 what_left = ____; Mins = ____; Seconds = ____

print("That's ", Hours, 'h', Mins, 'm', what_left, 's')
=====

```

Example:

```

=====
Enter the elapse time (sec):8000
That's  2 h 13 m 20 s
=====

```

Use P0\_template.txt to write your answers.
