

P5. Write a program to put rice quantity into proper Thai hierarchical units (Kwian, Tang, and Kilogram): ask a user for rice quantity in Kwian and then calculate its equivalent amounts in Tang (tg), and Kilogram (kg). Note: 1 kw = 100 tg and 1 tg (unmilled rice) = 10 kg.

Example:

```
=====
Enter rice quantity (kwian): 28
28 kw = 2800 tg = 28000 kg
=====
```
