P2. Odd or Even

Write a program to take in an integer number and print out the number and if the number is an odd number, also print "What an odd!". Otherwise, print "That's even." Confer to P1.

Example 1:

```
================================================
What is your favorite number:19

Your favorite number is 19.

What an odd!
================================================
```

Example 2:

```
================================================
What is your favorite number:38

Your favorite number is 38.

That's even.
================================================
```
