

P4. Write a function named `concat3` to take 3 names: they can be user's idols or ones respectable. Then, the function concatenates the first 3 letters from each name together IN ORDER with format

`L1I1I2L13L21L22L23L31L32L33`

and returns the result as a string.

Example

When invoke by

```
r = concat3("Jayasaro", "Zinsser", "Carroll")
print(r)
```

it results

```
=====
JayZinCar
=====
```
