

P1. Write a function named `make_list` taking no argument, creating a list containing string 'Flying squirrel', integer 77, and floating point 1.3 in order, and returning the created list.

Example

When invoke by

```
res = make_list()
```

```
print(res)
```

it results

```
=====
```

```
['Flying squirrel', 77, 1.3]
```

```
=====
```
