

## T1P6 – Thai Citizen ID Checksum

Thai Citizen ID can be verified if it's the legit ID or just random numbers, with the 13<sup>th</sup> digit is the checksum

$$n_{13} = (11 - (13n_1 + 12n_2 + 11n_3 + 10n_4 + 9n_5 + 8n_6 + 7n_7 + 6n_8 + 5n_9 + 4n_{10} + 4n_{11} + 4n_{12}) \bmod 11) \bmod 10$$

Write a program to find the checksum from the first 12 digits of Thai Citizen ID and display it in format of the formal Thai Citizen ID (see testcase below).

### Sample Testcase

Input	Output
123456789012	1 2345 67890 12 1
